### Cover Letter

My name is Thiago william, I am Brazilian and I am currently living in Ireland where I study English through an exchange. I am a frontend programmer and have been programming for over 8 years, always learning new technologies.

I started working only with the graphic part of web projects. Planning and creating interfaces for websites and web systems with Photoshop. As soon as I graduated in graphic design, I decided to improve myself in the front-end area, which I fell in love with HTML, CSS and JS.

As a developer, I directed my career towards web and mobile systems using Javascript technologies, considering the evolution of several frameworks such as NodeJS, VueJS, ReactJS, React Native and Ionic.

I quickly learn new technologies, and also the sector-specific concepts that ask me to work. I love to code and provide a great experience for users. Perform a project from start to finish is a pleasure, Seeking to deliver to the user a product that helps him to have efficient solutions, keeping the user interface intuitive.

In the penultimate company I worked for 6 years I started working as a web designer, I was promoted to frontend developer and over time I came to the supervisory position, leading a team of 6 people. We develop incredible projects like <http://consorcios.cnm.org.br/>. This is an online platform that aims to register and present information about existing public consortia in Brazil. We used the VueJS Framework, consuming data from an APIRest to feed a map that showed the main information on the platform.

I wanted an experience with mobile platforms, that's when I had the opportunity to join Monumenta's development team. Despite the short passage, I participated in the development of the MyVo Application. Which is a photovoltaic energy generation and management platform. It was an incredible experience working with React Native.

I recently felt the need to learn English because I wanted to participate in international events, learn technologies more quickly and be able to communicate better with other programmers. That's why I decided to do this exchange where I also hope to have an international experience.

In my free time: I like to run around the park and spend time with my family. I participate in conferences, online courses and help the javascript community by answering questions and contributing to open source projects.
